

WHAT IS GGPUBR

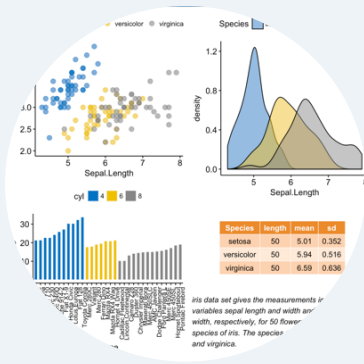

Wrapper around the ggplot2 package with a less opaque syntax for beginners in R programming.

Helps researchers, with non-advanced R programming skills, to create easily publication-ready plots.

Makes it possible to automatically add p-values and significance levels to box plots, bar plots, line plots, and more.

Makes it easy to arrange and annotate multiple plots on the same page.

Makes it easy to change graphical parameters such as colors and labels.
