# Section 9 – Online Clothing Store

Section 9 – The Challenge

You have been hired as a Data Analyst for an online clothing store. The company is expecting to undergo a rapid expansion in the coming months and they are not sure if their database can handle the amount of transactions that will come with the increased number of customers.

You have been tasked to investigate the current design of the database. If the design is found to be inefficient for online transaction processing, then you need to redesign the database.
